Executive summary

Project overview

This project delivers an interactive Excel dashboard ("Sales Analysis") to analyse sales performance across **occasion, category, month, hour (order time), product, and city**, with slicers for Occasion plus timelines for Order_Date and Delivery_Date. It is designed for quick executive-level monitoring while still allowing drill-down via filters and "Top 10" views.

Data & scope

The workbook references three source datasets: **orders.csv, customers.csv, and products.csv**, and organizes analysis through pivot tables and pivot charts. Core KPIs tracked on the dashboard are **Total Orders (1000), Revenue Generated (₹3,520,984.00), Avg. Customer Spending (₹3,520.98), and Avg. Order-to-Delivery Time (5.53 days)**.

What the dashboard shows

Revenue is broken down by **Occasion** (e.g., Anniversary ₹674,634; Raksha Bandhan ₹631,585; All Occasions ₹586,176), helping identify which event types drive sales. Revenue is also broken down by **Category** (notably Colors ₹1,005,645; Soft Toys ₹740,831; Sweets ₹733,842), highlighting product groups contributing most to topline results. Time-based patterns are visible through **Revenue by Months** (peaks in August ₹737,389 and February ₹704,509) and **Revenue by Hour** (higher values in evening hours such as 19:00 ₹185,771 and 20:00 ₹186,426).

Key findings (from current data)

- Strong seasonality: August (₹737,389) and February (₹704,509) are the top revenue months in the current dataset.
- Category concentration: Colors (₹1,005,645) is the highest-revenue category, followed by Soft Toys (₹740,831) and Sweets (₹733,842).
- Occasion performance: Anniversary (₹674,634) and Raksha Bandhan (₹631,585) are top-earning occasions, ahead of All Occasions (₹586,176) and Holi (₹574,682).
- Demand timing: revenue is comparatively strong around evening hours, with 19:00 (₹185,771) and 20:00 (₹186,426) among the highest hourly totals shown.
- Top cities (by orders): the dashboard highlights leading cities including Imphal (29) and Dhanbad (28) within the Top 10 list.

Business value & decisions enabled

This dashboard enables leaders to plan **campaign calendars** around high-performing months/occasions and prioritize merchandising for the most impactful categories. Operationally, the hour-wise view supports staffing and service planning around higher-order windows, while the order-to-delivery KPI (5.53 days) provides a simple service-level baseline to improve over time.
